

HOW AND WHEN TO USE APIVAR 2.0

- ✓ **Apivar 2.0** is effective when bees show high levels of activity, and is appropriate for use in both spring and fall.
- ✓ In each brood chamber, use **1 Apivar 2.0 strip per 5 frames of bees (FoB)** and leave the strips in place for **6 to 10 weeks**. If there's no brood, remove after 6 weeks; if brood is present, keep strips in for the full 10 weeks. Make sure to place the strips in the center of the brood, with both sides accessible to the bees.

- ✓ **Good to know:** There is **no temperature restriction** when applying Apivar 2.0 strips!

With Apivar 2.0, there's **no withholding period required**; you can place your honey supers immediately after removing the strips, streamlining your beekeeping workflow.

Pro tip:

- When separating the double strips, gently tear from top to bottom to avoid damaging the hanging system.
- For maximum efficacy, scrape strips free of wax and propolis and if needed reposition them in the brood area at mid-treatment. This ensures maximum contact between the bees and the strips.

APIVAR 2.0'S LONGEVITY

The **shelf life** of an unopened Apivar 2.0 pack is **24 months after manufacturing**.

AVAILABILITY AND PACKAGING OPTIONS

Apivar 2.0 comes in a range of pack sizes—**4, 12, and 60 strips**—making it a flexible option for both hobbyist and commercial beekeeping needs.

INTRODUCING APIVAR* 2.0

We are delighted to present Apivar 2.0, the latest advancement in varroa mite treatment that has recently received **both federal registration in the USA and in Canada.**

Developed by our dedicated Innovation team at Vétro-pharma, this new treatment is the **result of years of research and valuable customer feedback.** Apivar 2.0 has been carefully formulated to provide **consistent results, is not harmful for the bees** when used according to the label directions, and meets or exceeds **stringent quality standards.**

TESTED & EVALUATED FOR SAFETY

As always, the safety of your bees, yourself, and the purity of your honey are our top priorities. Apivar 2.0 has been tested in controlled field trials to assess not only its efficacy but also its impact on bee colonies. When used according to the label directions the results have shown that Apivar 2.0 is safe for worker bees, brood, and queens, even when applied at high temperatures.

Achieve efficacy with fast release of amitraz

Treatment efficacy is paramount when it comes to managing varroa mite populations, and **Apivar 2.0** has been formulated to produce a **significant mite drop** within **the first 3 weeks** of treatment.

Developed through comprehensive field studies, this treatment addresses the need for **rapid action**, delivering a swift reduction in mite populations during the first 3 weeks.

Apivar® 2.0 is an amitraz-based apiary product that treats not just one generation of Varroa mites, but **several successive generations**, reducing mite populations in the hive in **one application.**

Each batch of Apivar 2.0 is subjected to a rigorous analytical and **quality control protocol before release**, guaranteeing compliance to the highest quality standards.

STREAMLINED APPLICATION: SPECIALIZED HANGING SYSTEM FOR ALL HIVE TYPES

Time is of the essence for busy beekeepers, and Apivar 2.0 gets that! Our **new hanging system** simplifies the application process, **saving you both time and effort.**

And guess what? You can save your toothpicks for the appetizers—they're no longer needed to hang Apivar 2.0 strips! Understanding that beekeepers use an **array of hive types**, Apivar 2.0 features **adaptable strip lengths** that are compatible with various frame sizes, including Langstroth and Dadant.

Notably, for **Langstroth hive users**, a pre-cut line on the strip has been specially added. This thoughtful feature allows you to **easily place Apivar 2.0** strips between your brood frames, ensuring seamless integration and compatibility with your existing hive setups.
